

SUSPENSION ON THE MINI CROSSER T & E-MODEL

The suspension of the Mini Crosser consists of Front wheel:

Oildamped suspension fork. Same type as used on small motor bikes and mopeds. The characteristic of the suspension is made according to Mini Crosser test and specification, in order to secure an optimal driving characteristic of the complete vehicle.

The suspension fork has been used on the product since launching it 1½ year ago. The users really likes the function of it.

Rear wheel:

Main suspension: Rubber suspension blocks. Used on Mini Crosser scooters since 1997. We have not replaced any in the field. No leaking oil. No noise. Vibrations are isolated from the main chassis.

Additional suspension: Adjustable 25 mm rubber block. For heavy users the rubber block can be adjusted by a 13 mm fixed key, to increase the suspension characteristic.

Progressive suspension performance shock absorbers and suspension systems provides a smooth ride.
